Reduced time requirement and logistics effort with decentralised tool dispensing system

MAPAL offers various UNIBASE dispensing systems for optimum storage and management of tools, components and accessories, which can be individually networked with one another according to a modular principle. These systems are often situated in a central location in the manufacturing. In order to store and manage frequently required consumables in a decentralised and space-saving manner, MAPAL has developed the new, cost-effective UNIBASE-S single automatic dispenser. This can be connected to existing UNIBASE systems or used as an individual solution.

Optimally storage and management of tools, components and accessories with the UNIBASE-S

MAPAL offers various UNIBASE dispensing systems for optimum storage and management of tools, components and accessories, which can be individually networked with one another according to a modular principle. These systems are often situated in a central location in the manufacturing. In order to store and manage frequently required consumables in a decentralised and space-saving manner, MAPAL has developed the new, cost-effective UNIBASE-S single automatic dispenser. This can be connected to existing UNIBASE systems or used as an individual solution.

Installed directly on the workbench

Article removal is quick and uncomplicated in just a few steps. To do this, the employee logs on directly to the device via the integrated touchscreen. Only registered employees can remove articles. If no employee is logged on, central locking is active. After the desired article has been selected via the pre-installed software, the search function of the software supports this and an LED illumination identifies the compartment with the corresponding article. The dispensing drum is
